

Motivation Letter

My name is Afidz Achmad Novendi, usually my parents and friends called me Vendi. I was born in Semarang, 3th November 1995. I have grown in the family which has a tight rule about disciplinary from the small things like on-time having a meal to the big things which have relation to my future life like education.

After I graduate from Senior High School, I decided to choose the informatics engineering program in Dian Nuswantoro University which is one of the national excellence IT university. I chose that program not because the lucky guess, but it is about my passion in IT since I was nine years old. I remembered that was the first moment, I helped my neighbors to re-install their computer.

However, after I passed several tests, I had successfully join the international class, under the Faculty of Computer Science, Department of Informatics Engineering.

On the other hand, in my daily campus life, I had been chosen to be a coordinator on one of students organisation called 'International Undergraduate Programs Organisation' which has functionality to be a place for foreign and local students to discuss about courses, languages and exchange cultural event.

Because I had the good marks in every semester, I had a chance to follow student mobility in Khon Kaen University Thailand under Department of Computer Science on about 1 semester long. I followed several courses such as advance networking, script programming, computational science, software testing and also web technology.

After I finished the student mobility program, I continued my studies back to Dian Nuswantoro University until the graduation. Because I have interest in the field of Cloud, Virtualisation and Networking, I purposed the thesis entitled 'Enhancing HAPROXY Load Balancing Implementation Using Raspberry Pi 3 Model B to

Support High Availability of The Web Services' and successfully got the grade 'A'.

Finally, I have finished my bachelor studies and graduated on 30th March 2017 with cumlaude passing grade and get the GPA 3.52.

I have notice that the knowledge is always expanding as same as our universe, there are many ways to follow and get this new knowledge, for me, I choose to continue my study and take the Master Program which has relation to my background and I choose Hungary to be my next destination.

The first time I have got the information about Hungary and its Universities when I visited the representation of the Hungarian Embassy stand as well as couple of Hungary University representatives in European Union Education Fair in Jakarta. We talked much and it drives my interests to Hungary.

My decision becomes much stronger when The Hungarian Ambassador to Jakarta and the officials came to my campus and told me about the higher education, university life, daily life and also for stipendium hungaricum scholarship in Hungary.

If I have a chance to get stipendium hungaricum scholarship to continue my study there, I want to follow the courses to expanding the new skills, knowledge and I also want to get in depth in the field of Cloud, Virtualisation and Networking technologies on my further University

When all of the achievement missions are completed, I want to pursue my doctoral program then doing the research in the field that I am responsible to make it better, efficient and have a huge impact for life.

The last but not least, the true and heaviest mission is to give loyalty to my beloved county and also the knowledge to my future Students and prepare them to follow the fast growing Information Technology in the next era.
